How to use this product:

Fraction War: This can be used as whole class, small group, or partner work. Students take turns rolling a die to fill in the numerator and denominator. You could start with one die and then do the sum of two dice to increase the level of difficulty. The student/group with the larger fraction gets a point.

You can establish rules that target different objectives. For example, you can require that students only make proper fractions, or you can allow improper fractions.

Fraction War

Fraction War

Reflection/Exit Ticket Suggestions:

How did you decide what number or numbers to use as a denominator?

Did you try to fill in your numerator or denominator first? Why?

How did you decide whose fraction was larger?

Thank you for downloading this product. Be sure to leave feedback to let me know what you think.
